

NET ZERO waste | AFRICA South Africa BEARING MAN GROUP

Level 2: Operational Waste (measured)
- Including 19% Offset purchased

Level 1 | Level 2 | Level 3 | Level 4 | Level 5

Validity: 2026-03 to 2029-03

BEARING MAN GROUP

Net Zero Waste – Level 2
Operational Waste (measured)

Including 19% Offset Purchased

Bearing Man Group's head office in Gauteng, Johannesburg, serves as the central hub of operations for one of Africa's leading distributors of industrial engineered products and technical services. From this facility, BMG coordinates a network of 82 branches, ensuring efficient procurement, warehousing, distribution and specialist support across multiple sectors.

BMG supplies a comprehensive range of bearings, power transmission, fluid technology, and related engineering solutions to the industrial, manufacturing, mining and agricultural sectors. The building supports strategic management, technical expertise, supply chain coordination and operational oversight, playing a vital role in enabling productivity and production across the economies it serves.

Sustainable building features include:

- BMG takes a practical, operational approach to sustainability, focusing on actions that deliver measurable environmental benefit.
- Solar power has been introduced at selected facilities to reduce reliance on grid electricity, alongside the conversion to LED lighting to improve energy efficiency.
- Waste management practices prioritise waste avoidance, reuse and recycling, supporting a circular economy and reducing landfill disposal.
- Water use is managed responsibly, with efforts to limit consumption and reuse non-potable water where feasible.
